10:30 AM – 11:15 AM ET

#### **KEYNOTE: Don't let the Attackers Weaponize Fear: Malware in the time of COVID**

*Wherever we turn it feels like the news is all COVID-19 all the time. Many of us are feeling stressed and overwhelmed and attackers know it. At Microsoft we've seen an increase in the success of phishing attacks, one of the common vectors for malware and ransomware infections. Rather than inventing entirely new exploits, attackers are pivoting their existing infrastructure for ransomware and other malware delivery tools to COVID-19 focused lures to get us to click. In this talk we'll share insights into how the attackers have shifted their lures and provide recommendations for improving detect and response times to reduce the likelihood these attacks will work.*

Ransomware eSummit Day 2 opens

10:30 AM – 11:15 AM ET

**KEYNOTE: Lessons Learned from 700 Ransomware Investigations**

*Ransomware is the most common type of cyber security breach right now. With \$3.5 billion in losses reported to the FBI's Internet Crimes Complaint Center in 2019, it has proven to be immensely damaging to businesses and extremely profitable for threat actors. Which means it is unlikely to disappear any time soon. So what is the most effective way to handle a ransomware incident and minimize the business interruption it causes? During this session, Michael will draw upon more than a decade of personal experience in helping organizations respond to ransomware attacks, and combine this with exclusive insight from the more than 700 ransomware investigations Kivu has conducted. Key takeaways from the session include:*

- *Steps to prepare yourself for a ransomware incident*
- *Immediate action to take when ransomware is detected*
- *What to expect from the incident response process*
